TUESDAY 21 May 2013 – FOR IMMEDIATE RELEASE

Dulwich Home wins LABC Building Excellence Award

An extension to an ordinary suburban house in Dulwich has won an award for the best domestic extension at LABC's London Building Excellence Awards.

The award was given to the Home in Frank Dixon Way because of high levels of cooperation between the architects, engineers, build team, Southwark building control and the historic Dulwich estate. High levels of disabled access were also integrated into the design of the extension.

LABC Chief Executive Paul Everall said "Our regional building excellence awards are an opportunity to celebrate good practice. All our winners demonstrated how attention to detail and a positive working relationship with Building Control departments can achieve high quality and sustainable buildings fit for the future. Our awards are unique because they recognise how the work of local authority surveyors helps to improve building standards and boost sustainability and efficiency.

"This stunning domestic extension shows what can be achieved with high levels of cooperation between all parties at all stages of the design, approval and build process."

Chris Tomlin, MD at Croft Structural Engineers said: *"at Croft we strive to deliver excellence in everything we do and the satisfaction of our clients has been the driving force. We feel extremely privileged to have worked with such a diligent team with the same resolute approach as ours!"*

More than 330 building control professionals from across London attended the awards at the Guildhall in the City on Friday 17 May.
